## TECHNICAL MEMORANDUM

**To:** Don Carpenter, IDEQ, Boise

**From:** Robin Nimmer, TerraGraphics, Moscow

**Date:** February 1, 2016

**Project Code:** IDEQ C985 15019-08-02

**Subject:** Summary of the October 2015 Semi-Annual and Resampling Water Monitoring Events at the East Mission Flats Repository

---

The purpose of this memorandum is to summarize the East Mission Flats Repository (EMFR) October 2015 Semi-Annual and Resampling Water Monitoring events and present the data. An evaluation and discussion of the results will be completed in the 2015 annual water monitoring report for EMFR.

### 1 Sampling Summary

Figure 1 shows the locations of the seven groundwater monitoring wells, one decontamination well, two piezometers, and two floodwater levellogger sites in the vicinity of EMFR.

A detailed description of the field sampling, handling, documentation, and analytical procedures is provided in the *Sampling and Analysis Plan (SAP)/Quality Assurance Project Plan (QAPP) for Water Monitoring at the East Mission Flats Repository, Revision No. 2* (TerraGraphics 2014), hereinafter referred to as the EMFR SAP/QAPP; *Sample Plan Alteration Form (SPAFT) #1 of the EMFR SAP/QAPP* (TerraGraphics 2015a), hereinafter referred to as SPAF #1; and *Resampling Sample Plan Alteration Form October 2015 Event #1* (TerraGraphics 2015c).

Samples were collected from all seven of the groundwater monitoring wells on October 21, 2015. The results indicated that the prediction limits (PLs) (TerraGraphics 2015b) for cadmium and zinc at 07-EMF-MW-C were exceeded during the October 2015 sampling event. Therefore, resampling was conducted at 07-EMF-MW-C for cadmium and zinc on December 15, 2015.

All field and analytical procedures were conducted according to the EMFR SAP/QAPP and subsequent SPAFs (TerraGraphics 2014, 2015a, 2015c).

Attachment A contains the field sheets for each sampled well.

## 2 Water Levels and Hydrographs

Figure 2 shows hydrographs of the water levels recorded by levelloggers at seven monitoring wells and two floodwater monitoring locations in the immediate vicinity of the repository and data from the U.S. Geological Survey (USGS) Gage Station 12413500 on the Coeur d'Alene River near Cataldo, Idaho (USGS 2015) through October 2015.

Since the last monitoring event in April, water was detected at floodwater levellogger site LL-2 on October 10, 2015, but no water was detected at floodwater levellogger site LL-1 or in piezometers 10-EMF-PZ-A and 10-EMF-PZ-B. The field sampling crew downloaded levelloggers at LL-1, LL-2, and piezometers 10-EMF-PZ-A and 10-EMF-PZ-B during the October semi-annual event.

## 3 Groundwater Monitoring Results

The hydraulic gradient observed during the October 2015 Sampling Event is generally to the west (Figure 3). The historical gradient is to the southwest. Groundwater elevations calculated from hand measured data at the time of sampling were the lowest observed at all sites since monitoring began. Data from 09-EMF-MW-C Deep and 08-EMF-MW-E are not used to develop groundwater elevation contours because 09-EMF-MW-C Deep is screened deeper than the other monitoring wells, and 08-EMF-MW-E appears to be in a different hydrologic unit from the other wells based on water levels and water quality data.

Table 1 and Figure 4 display the cumulative field parameter data for the groundwater sites, including the resampling event for 07-EMF-MW-C. The specific conductance values measured at 07-EMF-MW-B, 08-EMF-MW-E, and 08-EMF-MW-F in October 2015 were the highest yet recorded at these sites. The meter was calibrated at the start of the day and checked at the end of the day, and the data were considered acceptable.

Table 2 and Figure 5 display the cumulative groundwater sample results for dissolved metals.

Dissolved metal concentrations for this project are compared to the groundwater total metal regulatory thresholds because no specific dissolved metal regulatory thresholds exist, and it is assumed that dissolved concentrations are indicators of contamination in groundwater under all conditions (CH2M Hill 2006). The dissolved metal regulatory threshold exceedences in groundwater for the October 2015 and resampling events are as follows:

- Dissolved cadmium at 07-EMF-MW-C for the original October event

Dissolved cadmium and zinc at 07-EMF-MW-C exceeded the PLs of 0.00364 milligrams per liter (mg/L) and 2.03 mg/L, respectively, in the October 2015 semi-annual event. Dissolved cadmium and zinc did not exceed the PLs in the subsequent resampling event in December 2015.

Attachment B contains the U.S. Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) analytical results (dissolved cations and dissolved metals). Attachment C contains the SVL analytical results (dissolved anions and total alkalinity).

## Summary of the October 2015 Semi-Annual and Resampling Water Monitoring Events at EMFR

---

The data from the October 2015 Semi-Annual and Resampling events were considered acceptable, and no laboratory or field data were rejected. The following data were qualified as estimates (*J*) as discussed in the data quality reviews (TerraGraphics 2016a and 2016b):

- Original October Sampling Event:
  - Dissolved arsenic results at 07-EMF-MW-A, 07-EMF-MW-B, 07-EMF-MW-C, 07-EMF-MW-D, 08-EMF-MW-F, and 09-EMF-MW-C-Deep because the results were greater than the method detection limit (MDL) but less than the contract required quantitation limit (CRQL)
  - Dissolved cadmium results at 07-EMF-MW-A, 07-EMF-MW-B, and 08-EMF-MW-E (duplicate only) because the results were greater than the MDL but less than the CRQL
  - Dissolved lead results at 07-EMF-MW-A, 07-EMF-MW-B, 07-EMF-MW-C, 07-EMF-MW-D, 08-EMF-MW-E (original only), 08-EMF-MW-F, and 09-EMF-MW-C-Deep because the results were greater than the MDL but less than the CRQL
  - Dissolved potassium at 07-EMF-MW-B because the result was greater than the MDL but less than the CRQL
  - Dissolved zinc results at 07-EMF-MW-B, 09-EMF-MW-C-Deep, and 08-EMF-MW-E (original and duplicate) due to the field blank results
  - All dissolved calcium, magnesium, sodium, and zinc results due to laboratory serial dilution
- Resampling Event #1:
  - Dissolved cadmium results for all samples due to serial dilution results

Any qualified data should be reviewed by an experienced data analyst before data analysis and interpretation.

sampling discontinued after April 2014						

Notes:

$^{\circ}\text{C}$  = degrees Celsius

mg/L = milligrams per liter

mV = millivolts

$\mu\text{S}/\text{cm}$  = microSiemens per centimeter

amsl = above mean sea level

DO = Dissolved oxygen

ORP = Oxidation-reduction potential

NS = Not sampled

R = Rejected

J = Estimate

= Data from the recent sampling events.

Notes:

mg/L = milligrams per liter

NS = Not sampled

U = Concentration was not detected (detection limits used by the laboratories are the contract required quantitation limit, the reporting limit, or the method detection limit, depending on the laboratory).

J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

J\* = The result is an estimated quantity. This analyte was detected in both the sample and an associated field blank sample during the same sampling event.

a. National Primary Drinking Water Regulation (Maximum Contaminant Level)

b. National Secondary Drinking Water Regulation

Antimony no longer analyzed for as of December 2014.

= Value exceeds the regulatory threshold

= Data from the recent sampling events.
